

ORI · All Recent Report-Ready Runs

7 report roots · 114 aggregate rows · 5,700 scheduled · 3,635 attempted · 10 model labels

Interpretation guardrails

Direct and MCP remain separate. Repetitions are not pooled. All cross-root pairs failed ORI compatibility checks, so no cross-run leaderboard is shown. Failures/timeouts/invalid outputs stay inside scheduled denominators.

Operator-supplied Qwen3.8 Flash/Armadin note: 34 HTTP 400 responses; 26 associated with final INFRA_ERROR tasks, 8 in later-completed records. Position 9 followed a 3,710,830-character tool result (estimated 4.49 MB request). Smaller failures and larger successes mean no single size threshold is established; response body was not saved, so exact cause remains unknown. These are infrastructure/protocol outcomes, not reasoning errors. Steven External cleanup is separate teardown.

API cost: provider input/output counters are present, but no recorded costs, cache-token split, or dated Nous Portal rates. Cost is unavailable, not zero.
